From obs: "The southwest corner of the cirque slid on the storm slab and broke 1200-1500’ wide, an east aspect had a crown that exceeded 6’ in places, and the south face of Divide Peak broke 2-6’ deep and ran full track. I observed no collapsing or cracking, but the signs of instability were still pretty clear." Photo: S Reinsel

Advisory Region
Northern Gallatin
Longitude
-110.98W

Latitude
45.39N
Avalanche Details: Very Large, Natural Avalanches Divide Basin
