Large Whumph at Blackmore

Date
Sun, 12/15/2024 - 17:10
Activity
Skiing

I observed a large whoomph about 150ft from the ridge (top of glades) going up Blackmore today while breaking trail. was definitely wind loaded area… I could feel the energy in the snowpack today once I got up higher, super sensitive it seems. ECTN 14 in my pit I dug lower down the meadow with no wind slab prevalent.

Region
Northern Gallatin
Location (from list)
Mt Blackmore
Observer Name
B. Neiberger
