Avalanches above Cleos

Date
Sat, 02/24/2024 - 13:30
Activity
Ice Climbing

Several small slabs pulled out above The Shimmy, left of Cleo's. Observed from across the valley while climbing the Dribbles. Did not observe them run, only saw the crowns. Unknown date of avalanches, but crowns were quite distinct from across the way.

Lots of wind transport all day.

Region
Northern Gallatin
Location (from list)
Hyalite - main fork
Observer Name
Matt Zia
