

Cracking/Collapsing on Bridger Ridge

Bridger Peak

Bridger Range

1/18/2020

Code

Elevation

8500

Aspect

SE

Latitude

45.77010

Longitude

-110.94000

Notes

From obs: "Observed whumping and cracking on a slope <25 degrees, E-SE facing. We were on top of the ridge in a safe place, but it was easy to see how a steeper slope could be triggered by someone on more mellow terrain below or off to the side. While traversing the ridge from the M to Bridger we observed multiple (past) [cornice](#) collapses that triggered small or no slides, but also a larger [slide](#) in the pinnacles."
