

Natural slide and poor stability on Ernie Miller Ridge

Date

Sat, 12/03/2022 - 12:35

Activity

Skiing

We toured to Ernie Miller today and saw a natural avalanche on a NE slope around 9600 ft. We heard and felt multiple collapses on our way in. We dug a pit on an east facing slope around 9300 ft where we found 105 cm of snow. We got a ECTN 2 result, failing on an interface about 15cm from the surface and ECTP5 failing 40 cm from the surface.

Region

Southern Madison

Location (from list)

Ernie Miller Ridge

Observer Name

Jake Onan
