

Mt Blackmore Stable Snow

Date

Sat, 12/17/2022 - 09:05

Activity

Skiing

Skied Mt Blackmore today. Dug a pit at 9550ft on a SE facing, 23deg, slope adjacent to the standard east ridge up-track. HS150cm. No wind effect on the surface.

Had a CTE and CTM on density changes in the top 40cm, ECTN on the same layers.

Pulling the CT block into the pit, the bottom 100 cm was very well bonded and pulled up dirt from the ground with it.

Skied numerous laps, and did not observe any signs of instability. The skiing was excellent.

Region

Northern Gallatin

Location (from list)

Mt Blackmore

Observer Name

Mike Lavery
