

2022-23 Snowpack Summary

Submitted by Alex Marienthal on Tue, 08/08/2023 - 12:23

After a warm start to fall, winter abruptly began with 1-3 feet of snow in the mountains on October 22-24. Like most of the west, southwest Montana had average to above average snow and cold temperatures the entire season. These conditions brought plenty of avalanche activity.
