

Blackmore

Date

Sat, 01/06/2024 - 10:45

Activity

Skiing

Gusty winds were transporting snow into drifts that formed cohesive wind slabs. Variable snow condition with a notable sun crust under the drifted snow (45.44653, -110.99872). Witnessed a dry slab natural avalanche start from near the summit of Blackmore mountain that ran into the main bowl. Multiple other observations of small loose avalanche activity on Blackmore mountain. The trail out was exceptionally rocky.

Region

Northern Gallatin

Location (from list)

Mt Blackmore

Observer Name

Devin
