

Goose Creek

Date

Fri, 01/01/2021 - 13:50

Activity

Skiing

Went for a quick tour up Goose Creek this AM. Looks like a few inches of snow out of the most recent cycle on top of a very weak base (shocking). No more than 10-12in coverage up top. Clear skies, no wind, temp ~30F.

No evidence of wind loading or any slab formation. Just enough snow to navigate without damaging your skis and get a few turns up high.

Region

Northern Gallatin

Location (from list)

Goose Creek

Observer Name

Chris Pierce
