

Maid of The Mist

Date

Mon, 03/22/2021 - 12:15

Activity

Skiing

Skied Maid of the Mist today. Tracks were on the slope from what seemed to be the day prior. Dug a quick pit and found 27 cm of storm snow on top of a solid (1F+) layer of ice forms about 5 cm thick. Slope angle was around 28-30 degrees, ENE aspect. No wind transport, short bursts of S2 snow with steady light flurries all day. Both CT and ECT tests yielded no remarkable results. Skied the slope and fun was had.

Region

Northern Gallatin

Location (from list)

Maid of the Mist

Observer Name

Nick Roe
