

S. Fork Deep Creek, N Facing, ~7,000 ft.

Date

Sun, 04/18/2021 - 10:43

Activity

Skiing

Travelled to the ridge between S fork Deep Creek and Pine Creek drainages, mostly on N to NE facing terrain between 7-9k feet. Observed numerous pockets of shallow (<5 inch) reactive wind slabs on the skin up, but these were relegated to small features and subtle crossloaded pockets. No recent natural avalanche activity seen.
