

Red Mountain area

Date

Sun, 01/23/2022 - 16:50

Activity

Skiing

Found buried SH in several locations down 15-20cm between Bacon Rind creek and Red Mountain. New SH forming, most notably between 8,000 and 9,000' where the inversion fog layer was visible this morning. SH smaller to nonexistent above 9200'.

No recent avalanche activity observed, no cracking or collapsing in recent snow and little sign of wind drifting past 24hr. Minor sun effect observed on steep solar asps.

Region

Southern Madison

Location (from list)

Red Mountain

Observer Name

Michael Best
