

Storm slabs at Bridger Bowl

Date

Tue, 11/08/2022 - 07:15

Activity

Skiing

Saw some cracking and propagation of a 6-8" storm slab on steeper terrain near the Bridger Lift. Gentle upslope winds seem to have compacted a slab near some terrain features, and I got a small propagation at the edge of the Sluice Box gully where the slope angle tipped up near 40.

Region

Bridger Range

Location (from list)

Bridger Bowl

Observer Name

Charlie von Avis
