

Natural Avalanche on MT Henderson

Date

Sat, 12/09/2023 - 04:00

Activity

Skiing

Observed this natural avalanche on the south summit of Mt Henderson. Slope is SE facing, 9800 ft. This slope is heavily wind loaded. I estimate the crown is two feet deep and the avalanche is D2. Likely occurred on Friday 12/8

Region

Cooke City

Location (from list)

Henderson Mountain

Observer Name

Jake Mundt
