

Recent Natural Wet slides in Bridgers

BRIDGER RANGE

Bridger Range

1/30/2024

Code

WL-N-R1-D2-O

Elevation

8500

Aspect

E

Latitude

45.85120

Longitude

-110.94800

Notes

I drove up Bridger canyon this afternoon and stopped in a few spots to glass the range for recent avalanches. There were many recent wet avalanches, both wet loose that gouged through the snowpack and wet slabs about one foot deep and 50-100' wide. Many size D2, some smaller. Happened sometime between Monday and today (1-3 days old, maybe some this morning). The main spots for recent wet avalanches were on Bridger Peak and south of the Throne. Mainly on sustained steep terrain with rocky outcrops and east-south facing. There was one wet [slab](#) on a northeast facing, mid-elevation slope near the Throne. South facing terrain near Fairy Lake had some wet loose activity. I attached a photo of the wet [slab](#) activity on Bridger Peak and south of the Throne.

Number of slides

4

Number caught

0

Number buried

0

Avalanche Type

Wet loose-snow avalanche

Trigger

Natural trigger

R size

1

D size

2

Bed Surface

O - Old snow

Problem Type

Wet Snow

Slab Thickness

12.0 inches

Vertical Fall

800ft

Slab Width

100.00ft
