

Wind transport

Date

Wed, 11/20/2024 - 10:00

Flew from Paradise Valley to Cody and saw large plumes of our snowpack moving off of the peaks and getting transported from strong winds which were more southerly in the western part of the range and westerly around Cooke. Evidence of heavy cross loading across Sheep mountain (pictures) and the whole range, I didn't see any evidence of avalanche activity.

Region

Cooke City

Observer Name

Jackson Negri
