

Bridger Peak

Date

Tue, 01/28/2025 - 23:45

Activity

Skiing

Took the ridge out to Bridger Peak. Winds have done their damage and skiing conditions were quite bad. Winds had affected snow at nearly all elevations.

Snow depths on SE and NE aspects were 120 cm, and the snowpack is dense, hard, solid, and stable. We couldn't find any evidence of near-surface facets from recent cold weather and clear days/nights. The combination of wind and warmth destroyed them if they existed.

On south aspects, the snow had become wet, and we spotted a few rollerballs/pinwheels - mostly near exposed rocks.

Region

Bridger Range

Location (from list)

Bridger Peak

Observer Name

Staples & Darby
